

SMX & Microsoft Azure

SMX has helped many organizations leverage the benefits of cloud. As a Microsoft Azure Expert MSP, SMX is a recognized leader in helping heavily regulated organizations employ highly complex systems to advance their digital transformation with a focus on security and compliance. Our expertise with Microsoft Azure technologies helps our customers transition securely from traditional IT environments to public or private cloud environments.

Microsoft Azure Expert MSP

SMX is a Microsoft Azure Expert Managed Service Provider (MSP). Inclusion in this program is only awarded to trusted partners that meet stringent requirements, including verified proof of excellence in customer delivery and technical expertise; and the successful completion of an independent third-party audit of their managed services, people, processes, and technologies. Only the most high-fidelity cloud-managed service providers are awarded the Azure Expert MSP recognition, intended to give customers confidence when selecting a partner to help them meet their digital transformation goals.

SMX holds the following competencies from the Microsoft AI Cloud Partner Program:

Solutions Partner:

- Infrastructure (Azure)
- Data & AI (Azure)
- Digital & App Innovation (Azure)

SMX has also been recognized by Microsoft for specializations in the following areas:

Solutions Partner:

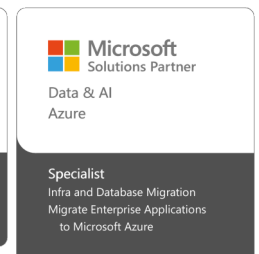

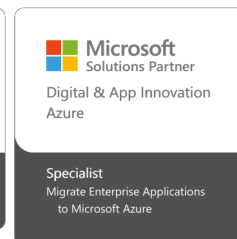

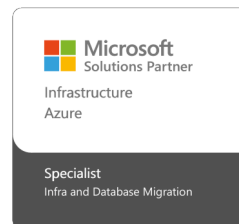

- Infra and Database Migration
- Migrate Enterprise Applications to Microsoft Azure

A Microsoft® AI Cloud Partner

SMX is a current member of the Microsoft AI Cloud Partner Program, and was a legacy Microsoft Gold Certified Partner for over 10 years. Currently SMX operates and maintains dozens of cloud enterprises and Web properties, including many on Microsoft Azure.

As part of the legacy partner program, SMX is an Azure 1st Tier CSP partner as well as a co-sell prioritized Azure partner. Under the legacy program, SMX was recognized with gold competencies for:

- Cloud Platform Application Development
- Application Integration
- DevOps
- Cloud Platform
- Cloud Productivity
- Datacenter

SMX & Microsoft

Customer Solution Spotlights

Federal Regulatory Agency

The agency's applications are critical to the operation of U.S. financial markets and required expert solutioning and engineering to support the highest levels of performance, availability, and security. The ability to ingest, store, process, transform, and analyze data securely from multiple internal and external data sources was required. Both the portal and the application migration needed to include support for Authority to Operate activities and an architectural review of key shared service and security mandates.

By moving their workloads to Azure cloud services, the Agency saves an estimated \$1.2M per year in operating costs and is able to focus on propelling their mission outcomes forward. SMX continues to provide 24x7x365 managed services to the Agency, as well as application migration and modernization support.

Pandemic Response Accountability Committee

As the COVID-19 pandemic took hold in 2020, the Pandemic Response Accountability Committee (PRAC)* was created to provide oversight of government resources distributed nationwide. The PRAC required a rich and immersive website at pandemicoversight.gov to provide transparency into the use of Coronavirus Aid, Relief, and Economic Security (CARES) Act funds. SMX brought together a team of industry thought leaders from Mobomo, Domo, Woolpert, Grant Thornton, and Microsoft to work with the PRAC to redesign and launch the new site in less than seven weeks. The team understood that the U.S. Government was at an inflection point during challenging times. The website needed to be inviting and easy to use, while incorporating the best data visualization tools available. The team brought together designers, geospatial experts, and fraud and analytics reporting experts to develop a robust platform to provide real-time information and tools to the public.

Global Medical Healthcare Technology Organization

SMX was selected to develop this multi-cloud migration strategy and approach. Leveraging our Foundational Agile Strategic Transformation (FAST) Program (Now SMX ElevateSM), we developed a multi-cloud decision framework, provided FinOps services and guidance, planned migration activities centered around the migration factory approach, designed and deployed foundational infrastructure components, developed repeatable migration templates, and provided managed services across AWS, Azure, and private cloud.
