

Key Intelligence Training Systems (KITSSM)

Adaptable Training. Operational Readiness.

Adaptable. Customizable. Mission Ready.

SMX KITSSM (Key Intelligence Training System) is a customizable and adaptable training platform designed to meet the evolving needs of military, government, and commercial organizations. By delivering remote, flexible, and mission-tailored training modules, KITS reduces costs, accelerates readiness, and ensures standardization across teams. Today's operational environments demand rapid adaptability, streamlined training pipelines, and solutions that can be tailored to specific organizational requirements. Traditional training programs are often rigid and geographically constrained. KITS was developed to address these challenges, providing an adaptable and scalable training ecosystem that empowers organizations to train smarter, faster, and more effectively.

Our offering supports both Software as a Service deployments—allowing customers to leverage the platform with their own instructors—and Training as a Service, delivering the platform integrated with experienced OSINT and FMV subject matter experts, with tailored instruction focused on real-world exploitation and analysis workflows.

Flexible by Design. Powerful in Execution.

KITS delivers an innovative, remote-first training platform that emphasizes adaptability and customization.

Modular Content: Courses can be tailored by mission, role, or organizational requirements.

Instructor-Friendly Design: Enables instructors to quickly create lesson plans, build coursework, and adjust training content on the fly to match evolving requirements.

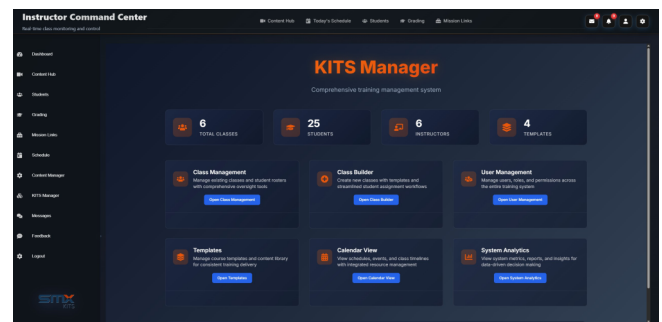

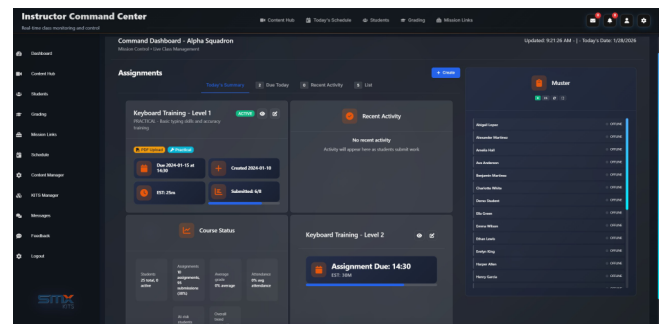

Student-Centered Experience: Intuitive, easy-to-navigate interface with clear readability, real-time grading, and instant instructor feedback to keep learning seamless and engaging.

Scalable Delivery: From small teams to enterprise-level deployments, KITS adapts seamlessly.

Cost-Efficient: Reduces travel, facilities, and logistical costs by prioritizing remote learning

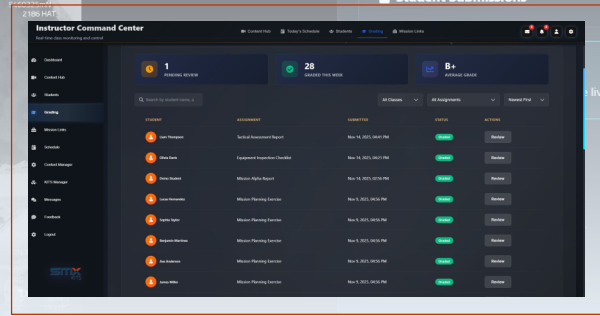

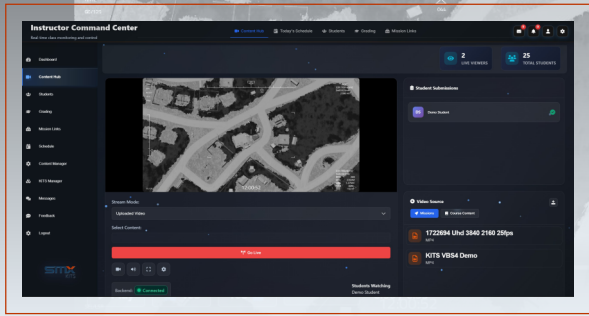

From Training Platform to Force Multiplier

SMX KITS delivers a range of benefits that make it a powerful solution for modern training challenges. The platform is highly adaptable, allowing organizations to quickly adjust to new mission requirements as they arise. It is fully customizable, enabling every client to design training programs tailored to their exact specifications. SMX KITS is also scalable, providing the same level of effectiveness whether deployed for small teams or enterprise-wide rollouts.

By prioritizing remote delivery, it is inherently cost-saving, eliminating unnecessary overhead tied to travel and facilities. Most importantly, the platform is operationally focused, ensuring training remains aligned with the real-world missions and objectives of the organizations it supports.

Key Features and Capabilities

KITS offers a robust suite of features designed to maximize training effectiveness and adaptability.

Course & Content Management

- Build courses with reusable templates
- Share documents, videos, and slides
- Create and distribute assignments

Live Instruction

- Live video streaming with screen sharing
- Synchronized content for all participants
- Student rewind without losing sync

Collaboration & Communication

- Real-time messaging and KITComm class channels
- Centralized notifications and alerts
- Instructor feedback and student workspaces

Seamless User Management

- Secure login and personalized profiles
- Easy class enrollment and bulk import

Scheduling & Planning

- Class scheduling and calendar integration
- Deadline tracking and attendance monitoring

Assessment & Analytics

- Real-time grading and assignment submissions
- Progress tracking with customizable criteria
- System usage and activity reports

Instructor & Admin. Tools

- Grading dashboard and class monitoring
- Content creation and broadcast controls
- System configuration and template management

Specialized Training Modules

- Typing and keyboard proficiency
- Trackpoint geospatial visualization
- Third-party tool and website implementation
- Mission-based, scenariodriven exercises

Security Features

- Encrypted communications and secure authentication
- Role-based permissions and session management
- Audit logging for compliance and oversight
