

# Modernize Your Data Platform with AWS Glue

## SMX helps clients drive positive outcomes with data

SMX works with clients to build ETL (Extract, Transform, and Load) processes using the Amazon Web Services (AWS) Glue service that makes it easy for clients to prepare and load their data for analytics. As an AWS Premier Partner, SMX offers clients the ability to easily create data pipelines, quickly transform and load data from various sources, and ensure that data is available for analysis. SMX also provides clients with expert advice and guidance to help them maximize their return on investment in AWS Glue and the AWS Suite of data products. Additionally, SMX offers clients a full suite of AWS Data services, such as Data Cataloging, Data Transformation, and Data Migration to ensure that the data ingestion process is seamless.

## Benefits

### ✘ Cost effective

AWS Glue is 7x cheaper compared to on-premises options, and 55% cheaper compared to other cloud options.

### ✘ Faster data integration

Integrate data quickly with AWS Glue to receive analytics in minutes, not months.

### ✘ Self-service capabilities

AWS Glue offers different development environments to fit varying needs.

## Why migrate your ETL data pipelines to the cloud?

With data coming from every area of your business, it can be difficult to manage it in a way that users across your organization can consume, analyze, understand, and act on quickly. AWS and AWS Partners like SMX can help you connect data with data engineers and ETL developers using AWS Glue, a serverless data integration service that simplifies how you discover, access, prepare, and combine data for analytics, machine learning, and application development.

# Modernize Your Data Platform with AWS Glue

## Start data analysis faster with AWS Glue

Migrating your data pipelines to AWS allows you to reduce costs, improve performance, and fully offload the infrastructure management needed for your ETL workstreams. Modernize your data platform using the AWS Glue data integration service to introduce a unified catalog and automation capabilities. This fully managed service makes it easy to transform data with self-service tools and reduce the time to analysis and insight from months to minutes. You can now focus on business outcomes without the need to constantly invest in Operations and Support for your Data Management tools and Platform.
