

Mission Operations & Intelligence

Expanding the Boundaries of Intelligence

Changing How C5ISR Services are Deployed Globally

For U.S. Forces and partner nations around the world, closing intelligence gaps is essential to assuring the mission, whether the goal is countering an adversary or delivering humanitarian aid. That is why SMX has changed how Command, Control, Communications, Computers, Cyber Intelligence, Surveillance, and Reconnaissance (C5ISR) services are deployed and fielded globally.

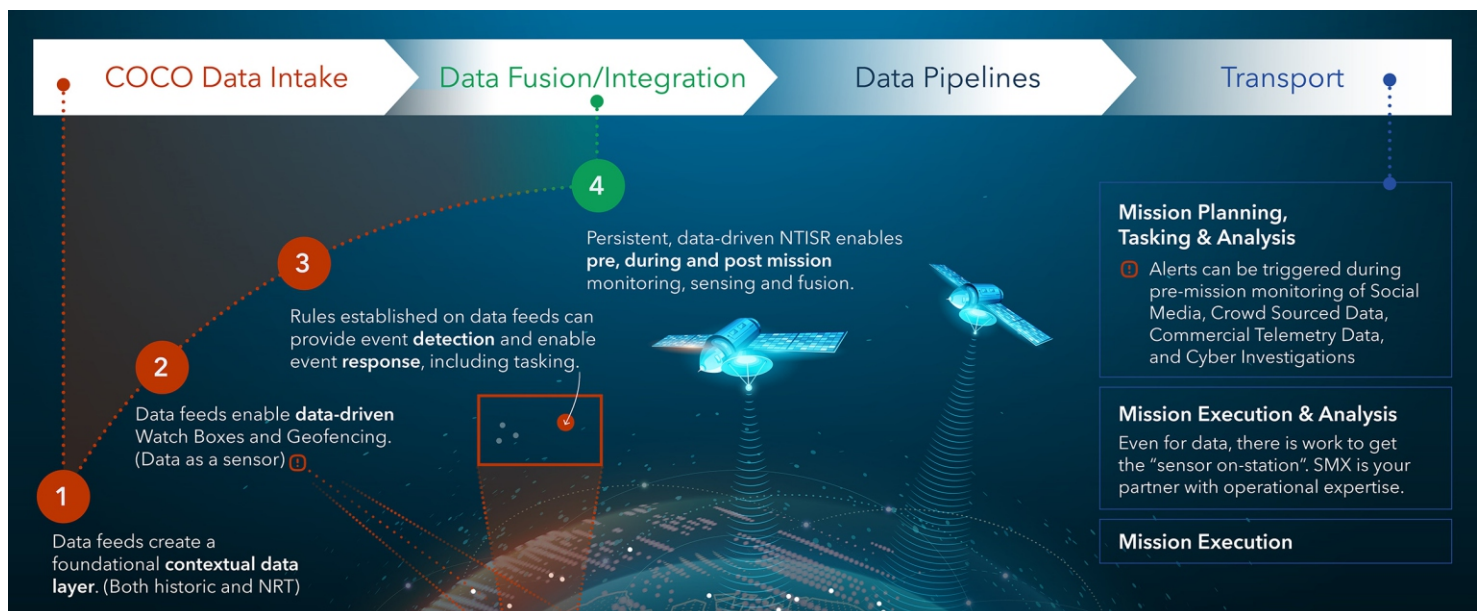

We provide mission planning and operations across multiple environments; land, sea (surface and subsurface), and air platforms; accommodation of customer payloads and data transport; and commercial payloads and transport. Our innovative platforms, sensors, and advanced analytics fill in crucial needs when military inventory assets are insufficient in number or deployed elsewhere. Our contractor owned/contractor-operated (COCO) ISR operations allow intelligence teams to rapidly establish or redirect ISR assets to areas of need, especially where COCO hardware is less visible or attention-grabbing than military inventory.

ELEVATE ISR™ - Mission Decision Analytics and Data Insights

Our Elevate ISR™ platform can operate on its own or augment your traditional data collection with digital data sources, including publicly and commercially available information (PAI/CAI).

- ✗ Intelligence Analysis, Assessment, and Operations
- ✗ Data Science
- ✗ C5ISR Capabilities Innovation
- ✗ Test, Evaluation, and Deployment of C5ISR Systems
- ✗ Training Services and Equipment
- ✗ Cybersecurity and Information Assurance
- ✗ Operations, Maintenance, and Logistics
- ✗ Surge/Special C5ISR Services

ISR Transformation - Meeting Changing Demands at Mission Speed

To support mission needs and CONOPs worldwide, ISR information needs to be captured, analyzed, and distributed efficiently. From lightweight maritime UAS platforms to towed underwater arrays and larger airborne platforms, we can support missions wherever they take you—from urban centers to austere environments. SMX tailors our solutions to your needs, supporting edge compute and communications globally. Our cloud expertise allows us to leverage remote models and analytical databases, access nearly unlimited storage capacity, and deliver information to match mission urgency and decision timelines. Our Mission Solutions team is committed to partnership, agility, flexibility, affordability, and non-proprietary tailored solutions for successful customer missions.

Space Domain Solutions for ISR Missions

With our extensive global ISR experience, SMX and our partners effectively operate and maintain fixed, mobile, and temporary Ground Control Stations (GCSs) in response to COCOM-specific requirements. As a Lead Industry Integrator (LII), we mesh proven cloud-scale data, AI/ML, and data analytics capabilities with rapid acquisition and integration strategies to solve problems and assure mission success in an evolving threat environment. Our space domain solutions span a broad range of mission capabilities, such as equipment and logistics support; intelligence support; ISR payload support; and Research, Development, Test, and Evaluation (RDT&E) support, including designing manned/unmanned ISR platforms to integrate with various systems for space-based operations.

Client Program Spotlights

U.S. Africa Command has partnered with the SMX team, comprised of industry-leading, best-of-breed partners to lead efforts to counter transnational threats and promote regional security, stability, and prosperity on and around the African continent. Team SMX conducts COCO ISR missions and provides data collected to USAFRICOM in support of Military Information Support Operations (MISO). Our mission-focused engineering and IT expertise includes facility preparation, payload integration, cyber risk mitigations, power supplies, and payload modifications. SMX will continue as a prime contractor to the U.S. Africa Command on the **AFRICOM Reconnaissance Intelligence Exploitation Services (ARIES)** Task Order. ARIES is a complex, multi-tenant task order providing cutting-edge, full life-cycle intelligence solutions through cloud-enabled data insights and decision analytics. ARIES is dedicated to equipping decision makers with accurate, relevant, and timely intelligence information to achieve continued decision superiority across the vast and complex AFRICOM area of responsibility,

U.S. SOCPAC has partnered with the SMX team on the C5ISR - Pacific Operations (C3PO) Task Order to support the warfighter missions by providing C5ISR and Intelligence Processing, Exploitation, and Dissemination (PED) services to SOCPAC. The SMX team was selected to manage SOCPAC's multiple C5ISR programs within the USINDOPACOM Area of Responsibility (AOR). The team is delivering agile, innovative, and efficient solutions for airborne, ground, maritime, and/or space-based C5ISR platforms. Our mission-focused engineering and IT expertise includes intelligence analytics, facility preparation, payload and sensor integration, cyber risk mitigations, and our IA team ensures information systems are mission ready with managed risk profiles.

U.S. Southern Command is supported by SMX and its multi-partner team. SMX contributes to military information support operations throughout the Caribbean, Central, and South America. Our management, engineering, and logistics teams gather, compile, categorize, and share threat information from transnational criminal organizations, violent extremist organizations, and other regional and external bad actors. Our expertise includes payload data extraction, communications integration, automated interpretations, and design of innovation exercises and operational experiments. SMX provides training and system integration support to ensure our allies are fully mission capable in minimal time for rapid response. SMX will continue as a prime contractor to the U.S. Southern Command under the **Monitoring, Analysis, Reconnaissance, Logistics, Intelligence, and Network Services (MARLINS)** Task Order. MARLINS is a complex, multi-tenant task order providing cutting-edge ISR solutions through cloud-enabled data analytics. With this award, SMX will continue providing Counter Narcotics, Countering Transnational Organized Crime, C5ISR, intelligence collection, and analysis support.

SMX harnesses the transformative power of technology to achieve mission success as a leader in digital and mission solutions, specializing in secure and advanced cloud, ISR, cyber, data analytics, engineering, space, and IT solutions. Operating in close proximity to our clients across the globe, the SMX team has a shared vision to deliver scalable and secure solutions to assure outcomes for the critical missions of our Government and commercial clients.

A few of our contracting vehicles: GSA ASTRO, GSA Alliant 2, GSA OASIS, GSA MAS IT, NITAAC CIO-SP3, SeaPort-NxG, and DIA SITE III.
