

CommandSense is an innovative software solution that delivers insights across a broad range of complex topics, from narcotics trafficking to other areas demanding sophisticated analysis. This software combines advanced technological elements to enhance its overall functionality, including user-centric design, comprehensive data integration, and adaptive chat capabilities.

Key Elements

- UI/UX Development tailored to mission-specific requirements
- Integration with the External Data Linkage Application (EDLA)
- Development of Interactive Chatbots
- Machine Learning (ML) Pipelines to refine state-of-the-art large language models (LLMs) for:
 - ♦ Multilingual Translation
 - ♦ Text Summarization
 - ♦ Extraction of Key Themes
 - ♦ Entity Relationship Extraction
 - ♦ Named Entity Recognition

Interactive User Dashboards

In collaboration with Tableau Public, SMX enhances CommandSense's user interface, facilitating intuitive data visualization.

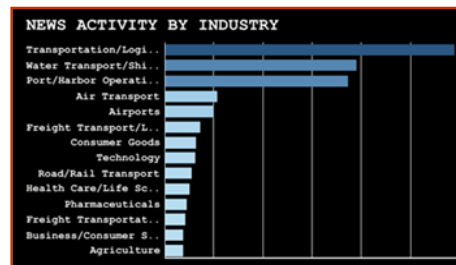

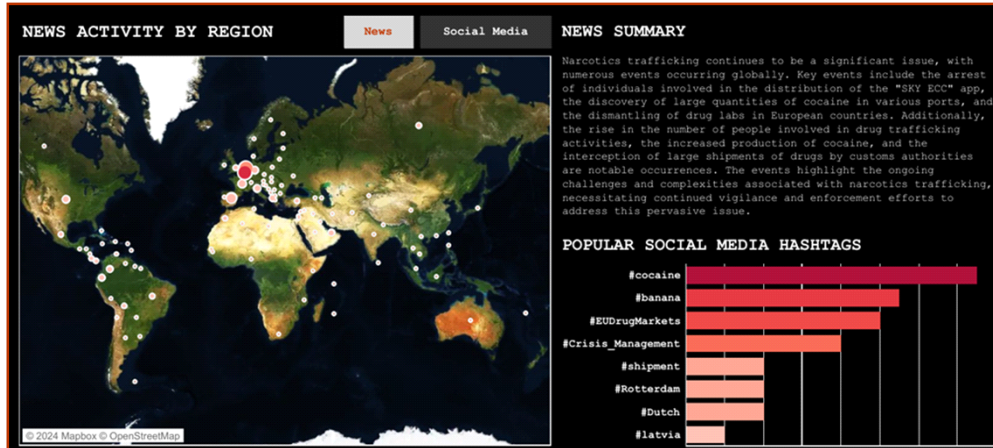

CommandSense enables users to represent data in various formats, aiding military and business professionals in strategic planning and maintaining situational awareness. The software can search news and social media for specific terms, link them to geographical locations, and generate charts to illustrate the frequency of these terms. Additionally, it leverages artificial intelligence to provide summaries of news from multiple sources.

Visit Tableau Public and explore the CommandSense user interface:

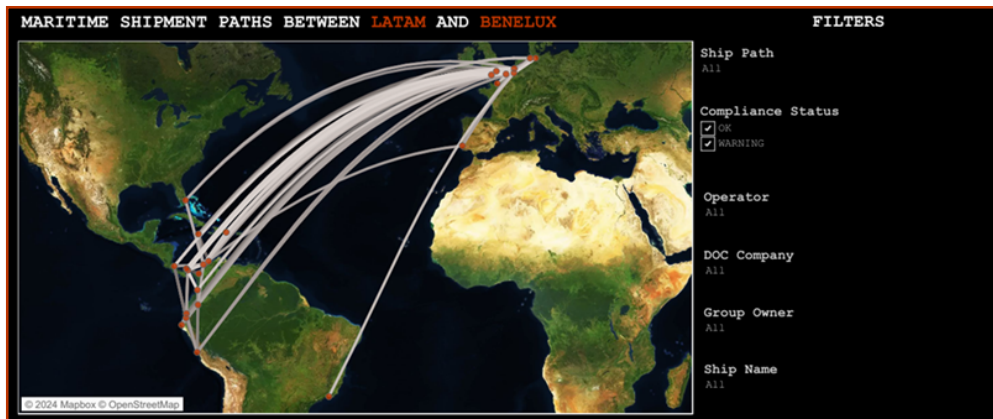

Interactive User Dashboards

CommandSense can identify and display the industries, organizations, and agencies linked to analyst-defined key terms.

CommandSense also features an interactive map to visualize data sources dynamically. Users can select specific data points on the map to access detailed information for easier analysis. This functionality is particularly useful in tracking shipment data flows between regions like Latin America (LATAM) and the Benelux countries.

These features collectively make CommandSense a powerful tool for in-depth data analysis and decision-making support.
